133 lines of <any> for 21 modules

```
declare module 'react-dnd' {

  export var DragSource: any;

  export var DropTarget: any;

  export var DragDropContext: any;

}
```

```
declare module 'react-dnd' {
  var exports: any;
  export default exports;
}
```

custom-typings.d.ts after updates

Only 7 modules are left, BUT for 3 of them there are @types modules.

Be carefull with this! The fact that @types exists, doesn’t always mean that it is good enough.

@types/react-dnd — a lot of issues with decorators syntax.

@types/victory — good typings, but not full. Not all components are included.

BUT we’re developers and we should find a way how to use 3-rd party dependencies as much as possible :)
