* Always setup the project on your local
(before handover process, if you're able to do this)

Why?

- project runs only on nodejs v6.10.11
- react-router typings should be only v0.14.17
- docker machine is in different repository
- you can't even imagine how much information exists in devs' minds only

* Always setup the project on your local
(before handover process, if you're able to do this)
